

INSTALLATION INSTRUCTIONS
BLACK POWDER COATED ANTI-VIBRATION PEGS
#PEGSBK

Note:

These pegs, mounts and hardware have a nickel/chrome base coat under the satin black powder coat finish. This is done to prevent any rust or corrosion at the wear points. Its is normal for some of the black powder coating to wear off (exposing the nickel/chrome base) where the pegs pivot on the mounting blocks and on the bolt heads. Again this is normal and they will not rust at these points. If desired the satin black finish can be touched up using a satin black model or spray paint.
